

KLINIKUM ST. MARIEN AMBERG

Information about the Lifesize conference system

Despite the corona pandemic, St. Marien Hospital Amberg is still available to its patients and interested parties for questions on specific topics. Therefore, all of our face-to-face events will not be continued as on-site lectures, as before, but as online lectures via Lifesize.

The clinic will provide a link on the home page of its website www.klinikum-amberg.de one day before the planned event. All participants must click on this link at the time of the webinar in order to be able to participate afterwards. We recommend testing the link in advance.

For active participation, a smartphone with access to a camera and microphone or a PC connected to the internet with a camera and a microphone is required. For those interested who want to remain anonymous or just want to be a passive listener, Lifesize offers the option of turning off both the camera and the microphone. For participants who want to remain anonymous, we also recommend using an alias.

To avoid unnecessary background noise, we ask that participants mute their microphone in Lifesize. In order to continue to hear the speaker, the loudspeaker must be switched on. You can ask questions using the "raise your hand" option or using the chat function.

Thank you!

We are looking forward to many participants!
